

Shen Xu

AI Visibility, Decision Systems, and Emerging AI-Native Frameworks

About

Shen Xu is a researcher and strategist working at the intersection of AI visibility, digital systems, and decision structures. His work explores how AI increasingly mediates information selection, interaction, and decision processes across digital environments.

Research Focus

- AI-mediated systems
- AI visibility and discoverability
- Agentic search and selection
- Decision systems
- AI-native GTM strategy

Featured Work: Decision Authority Economy (DAE)

Explores how economic value increasingly shifts from attention capture toward participation in AI-mediated decision pathways.

Featured Work: Agentic Search Optimization (ASO)

A practical introduction to visibility and selection mechanisms in AI-native environments.
